

CASE STUDY: LOGAN HEALTH

OVERVIEW

Logan Health in Montana has a small staff of two pathologists and one pathologists' assistant, managing 18,000 cases per year, and that number increases by about 1000 cases annually.

CHALLENGES

With ever-increasing cases and not enough staff, the lab team was overworked and overwhelmed. Logan's sole pathologist's assistant (PA) was working overtime every single day, and overtime expenses were rising. The lab planned to hire another PA just to keep up with the work load.

SOLUTION: VOICEOVER PRO

VoiceOver PRO made it possible for the limited staff to get everything done within a normal workday, completely eliminating overtime. With PRO's automation, the PA even set a block-processing record! The pathology lab canceled its requisition for a second PA because another hire simply wasn't needed, thanks to PRO's efficiency and productivity improvements.

“VoiceOver PRO has surpassed my expectations. Pathology labs should invest in PRO, because the ease-of-use is just phenomenal.”
